

CAB Abstracts®

Available via EBSCOhost®

The leading English-language abstracts information service providing access to the world's applied life sciences literature.

Produced
by **CABI**

Global in scope, coverage in this database includes agriculture, environment, veterinary sciences, plant sciences, mycology and parasitology, food science, human health and nutrition. *CAB Abstracts* offers extensive coverage of journal and non-journal literature from around the world including annual reports, general reports, books, conference proceedings, field notes and much more.

As the perfect complement to *CAB Abstracts*, *CAB Abstracts Archive* provides access to an additional **1.8 million records** captured between 1910 and 1972—for the most comprehensive search results.

***CAB Abstracts* features:**

- Over 7 million records with coverage dating back to 1973
- Over 170,000 full-text journal articles, reports and conference proceedings
- Publications from over 116 countries in 50 languages
- Indexing for over 10,000 academic journals, books, conference proceedings and reports specially selected by subject experts
- Comprehensive subject coverage with the CAB Thesaurus

About CABI:

CABI is not like most other publishers. Our commitment to publishing databases, books and other information resources is not driven by profit. We are a not-for-profit organization with a mission that has scientific research and international development at its core.

CABI improves lives worldwide by providing information and applying scientific expertise to solve problems in agriculture and the environment.

More than 800 million people in developing countries live in rural areas—the majority relying entirely on what they can grow themselves in order to survive.

Through our work, not only are scientists and institutions provided with the knowledge they need to support their own work, but also smallholder farmers are helped to lose less of their crops to pests and diseases, improve crop quality and yield, and create better livelihoods for their families.

These are just two examples of the thousands of people helped by our work:

Elishililia Alex in Tanzania has been trained to use better techniques to fertilize and protect her maize. She has more than doubled her crop yield.

Harpal Singh, a smallholder farmer in northern India, has used a new advisory service delivered to his mobile phone through a CABI partnership with mobile service providers. His earnings have increased by 50% and his sugarcane harvest, threatened by a serious aphid attack, was saved.

Our customers contribute to this important work just by choosing our products.

We thank them all.
